Art Unit: 2627

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8 drawn to a static memory system relying upon electron emitters, classified in class 365, subclass 118.
- II. Claims 9-12, drawn to a dynamic memory storage system, classified in class 369, subclass 126
- III. Claims 13-23, drawn to a static atomic memory storage system, classified in class 365, subclass 151

The inventions are independent or distinct, each from the other because:

Inventions I, II and III are unrelated.

Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions

In the present circumstances, the inventions of Groups III and I are drawn to static memory systems found in class 365; while that of Group II is drawn to a dynamic memory system.

Furthermore, the two static groups are broken further into different areas/effect.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction were not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Also, because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art due to their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Due to the divergence of the above claimed inventions, no telephone call was made to applicant's representative in order to request an oral election to the above restriction requirement.

Art Unit: 2627

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103 (a) of the other invention.

Applicant is given One month within which to respond to the above requirement.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Aristotelis M. Psitos whose telephone number is (571) 272-7594. The examiner can normally be reached on M-F: 6:00 - 2:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dwayne D. Bost can be reached on (571) 272-7023. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
